

As populations grow and cities become more crowded, there is pressure throughout the world to construct ever-taller buildings to provide accommodation and offices. Many people object to such developments, citing the social as well as the physical dangers.

- What benefits do skyscrapers bring?
- Do you agree with the objections to skyscrapers?

Nowadays with urban sprawl which is an unfortunate by-product of population growth, the need for more and more land to build on it is undeniable, so it is obvious that no action by a single country would solve this problem. These are global challenges rather than national ones. This has been the most problematic matter of communities over the recent decades. This essay will discuss some of the advantages and disadvantages of the skyscrapers.

As I mentioned above, the population growth has led to urban sprawl and consequently the need for housing for individuals is inevitable, so the best part of building skyscrapers is that we could settle more people in the less area, and treat with the environment in a more friendly manner, friendlier, so the easiest way for governments to handle the housing problem and facilitating housing for the various spectra of the populace is to build such tall buildings to control the increasing number of fading lands.

Despite the benefits mentioned above there are some drawbacks in this issue. Not only could these buildings could have a social effect on society but also there could be physical dangers too. Although the skyscrapers could be assumed as the cities edge, the benefits are not as great as it is often assumed. One might argue that despite although the skyscrapers could be the cities' pride symbol, but over the decades it could be treated normally and thus no more could they could be a symbol. Moreover, as for the social disadvantages, it could be also have an impact on culture. For instance, pure antediluvian architecture of that certain country could be gone as the individuals get more and more the same.

In a nutshell, although it may seem that advantages outweigh the drawbacks, the reverse side of the coin should be also taken into consideration and governments and authorities should take more environmentally-friendly measures to cope with this issue.
